

PROCESS PAYMENTS SECURELY WITHIN DYNAMICS CE AND PROTECT YOUR BUSINESS

For companies using Microsoft Dynamics™ CE for sales and marketing, taking secure payments can be difficult and require custom solutions. We've solved that problem. Introducing Clever Division™, formerly StagedPay™, by Red Maple™, a Dynamics partner since 2003. Clever Division provides a secure and flexible method of processing credit card payments.

The key to our security is simple. Clever Division divides credit card numbers and locks them up in different vaults. Since your business doesn't store complete credit card numbers anywhere, hackers can't steal them and you're protected from theft and fraud.

SECURITY FOR YOU AND YOUR CUSTOMERS

With Clever Division you can take orders online, by phone, email, and text with no worries about fraud and theft. It's simple, fast and secure because your business doesn't collect and store full credit card numbers.

ADVANTAGES FOR RETAILERS AND MERCHANTS

- **HISTORY OF SOLUTIONS**
We've published solutions for Microsoft Dynamics F&O since 2003. Red Maple understands your needs and how to fulfill your requirements.
- **SOFTWARE FOCUSED**
Our solutions are designed to provide a software solution to work with your processor. We don't charge a percentage fee per transaction or require you to work with specific processors.
- **SECURE PLATFORM**
Red Maple's solution is designed to provide the most secure PCI platform available. With two-factor card entry available, your customer-service team can securely enter cards without exposing your customers' data.
- **CHOOSE YOUR ENTRY**
Your team can accept credit cards by entering the entire number, with two-factor credit card entry or by allowing your customers to enter the full number.

HOW IT WORKS

CUSTOMERS PLACE AN ORDER

You can accept their credit card information online, phone, email, and text.

YOU MAKE THE SALE

You can accept their credit card information online, phone, email and text.

- 1. CUSTOMERS HELP OUT** - You enter two-thirds of the customer's credit card numbers in CE. Using two-factor authentication, the system automatically generates an email, text or phone call to the customer to get the remaining one-third of the credit card numbers.
- 2. YOU DO IT ALL** - Have your team enter the entire credit card number into CE.
- 3. THEY DO IT ALL** - Allow customers to enter their full credit card numbers.

Using the customer card entry method or the traditional CSR entry method, the data is never stored to a database. Once the numbers are verified with your processor, Clever Division delivers the secure token to the order in CE. That means no one has access to the full account and credit card information and the data remains secure.
