

PROTECT YOUR BUSINESS FROM CREDIT CARD THEFT

Clever Division™, formerly StagedPay™, safeguards your customers' credit card information from theft, fraud and breaches. The key to our security is easy and simple. We lock-up customer data separately. Clever Division prevents attacks by collecting and storing data in different vaults and requiring multiple keys to authenticate, verify and open them.

SECURITY FOR YOU AND YOUR CUSTOMERS

With Clever Division you can take orders online, by phone, email, and text with no worries about fraud and theft. It's simple, fast and secure because your business doesn't collect and store full credit card numbers.

ADVANTAGES FOR RETAILERS AND MERCHANTS

- Dramatically reduce theft and fraud when the card is not physically present.
- Criminals can't use stolen credit cards without traceable information to verify and complete transactions.
- Reduce cost per transaction from credit card processors due to lowered risk.
- Be up and running in one week.
- Full integration with multiple major credit card processors.
- Eliminate data network breaches, financial losses and damages to your brand.
- Reduce PCI footprint, and in some cases, qualify to use an SAQ-A.
- Manage invoices 24/7 through a convenient and secure customer portal.

HOW IT WORKS

CUSTOMERS PLACE AN ORDER

Customers can place orders online, or via phone, email or text.

CUSTOMERS ONLY GIVE A PORTION OF THEIR CREDIT CARD INFORMATION

Customers only provide the first four digits, last four digits and expiration date – which you enter in Clever Division, or your own software. The system then automatically generates an email, text, or phone call to the customer to get the remaining credit card numbers.

YOU MAKE THE SALE

In a secure, hosted environment, Clever Division combines all credit card numbers like a combination lock. Once the numbers are verified, the system secures the card as a 'token' and sends it to your processor to finish the sale. That means the no one has access to the full account and credit card information and the data remains secure.
